

Testcase:

One of the travel websites requires you to automate their Flight Search function.

Automation Requirements:

Launch a new Browser.

Open URL <http://jt-dev.azurewebsites.net/#/SignUp>

Validate that the dropdown has "English" and "Dutch"

Fill in your name.

For organization, use your name as well.

Input your email address.

Click on "I agree to the Terms And Conditions"

Click on "SignUp"

Validate that you received an email.

Tech Stack:

Selenium-protractor.

Node js is required. Use npm install to download required files.

How to run Test:

run protractor conf\conf.js from terminal/cmd/powershell

Test Result:

1. Validate that the dropdown has "English" and "Dutch": Positive. English & Dutch is present.
2. The Name field accepts alphanumeric as well as special symbols. Same is with the Organisation field.
3. Proper email is required for the email field.
4. No character limit on the name & organisation name field.
5. All fields are mandatory.
6. **Validate that you received an email:** Positive. Email received.

Test Report:

The test report is generated at: assignment > JabaTalks > tmp > screenshots.

Check report.html file.

Note: Delete all the data in screenshots folder before running test.
